                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92207-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CLLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-MXY-1996 (first entry)
HLA-B7 CTL modulating peptide (B7.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

alpha-1 domain, used for preventing rejection of transplants or

treating autoimmune diseases

Example 1; Page 19; 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating

activity. A peptide-type compound or variant is claimed which has

immunomodulating activity, including the N-terminal acylated and/or

C-terminal anidated or esterilied forms of up to 60 amino acids, where

the peptide-type compound comprises the formula; A-B, where A, B =

C, S or N; aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 =

D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or

small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino

acid. The sequence in the brackets may optionally be absent or truncated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        at any peptide type bond within the brackets. Cytocoxic T lymphocyte; CTL; major histocompatibility complex; MHC; imminosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-Bw62.
    (positions
amino acid sequences related to a class I HLA-B alphal domain (position 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of I cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autolmmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis. The products can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
Human leukocyte antigen; HLA; peptide; transplantation; neoplasia;
parasitic disease; cytotoxic T lymphocyte; modulation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              While Stringers of the comperison of surface membrane proteins - which may limibit cytolytic activity and differentiation of CTLs.

Example 12, 20pp; English.

Example 12, 20pp; English.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the Frotein P74 is a T-cell surface membrane protein p74 is a T-cell surface membrane protein p74 is a T-cell surface membrane protein p74 is a sociated with T-cell activation in mammalian T-cells, and is also associated with T-cell activation in mammalian T-cells, and is also and Induced number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an containing a covalently bound HLA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60 eW (see R95446), induces calcium influx, and inhibits cytocoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of determining the amount of binding between the candidate composition or CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                            Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-BW62. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12-NOV-1996 (first entry)

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the HLA-Bw62.60-84. These sequences can be used to isolate the protein p74 crown a T-cell lysate. P74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. P74 is found in a limited number of cell types, but is particularly expressed on and T cells. P74 can be isolated by lysis of a suitable cell with an amphoreric detergent, and then passed through an affinity column containing a comprising the extracellular fragment of p74 combined with HLA-B7702.60-84 (see R95416), induces calcium influx, and inhibits compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of containing the amount of binding between the candidate composition containing the amount of binding between the candidate composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mew peptide(s) based on class I HLA antigen domains - used for modulating cytotoxic T-lymphocyte activity towards targets claim 9; Rage 53; 61pp; Engilsh.

The peptide (or a fragment of at least 10 amino acids, joined at at The peptide (or a fragment of at least one terminus to a sequence other than that of wild type HLA antigen) is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which beind to it and removing subsets of CTLs from a T-cell composition.
                                                                                           HAP-B15 (12115.)
HAP-B15 gene - used in DNA probe and transformant cells for immunising animals, for developing monoclonal antibody.
Claim 1: Page 1: 11pp: Japanese.
Probes comprising part of the sequence encoding this sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-B35 antigen. See also J03112485 and J03112487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.

C,Comment: Comparison of a number of class I allelic sequences (-B40 vs. -B7 and -A2 c).Comment: comparison of a number of class I allelic sequences (-B40 vs. -B7 and -A2 y restricted to the alpha-1 and alpha-2 domains. The most conspicuous clustering of vossible alloantigenic determinants of these antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Cross-references: GDB:120048; OMIM:142830

15. Meaveries for gene therapy, partic for tumours - comprising one transcribed encoding one or more cistron(s) which express of a genetic material encoding one or more cistron(s) which express of the management or therapeutic peptide(s).

15. Marquet M. 27. Sopp; English.

15. This HLA-B7 antigen encoding plasmid was developed to incorporate many advantageous features, eg. the kanamycin resisitance gene. The cradication of two open reading frames encoding portions of SV40 viral encoding lowers the risk of tumourigenicity. The vector may also operate as a cassette into which cistrons may be inserted and removed at will for the transcription and subsequent translation of peptides of interest. The vector is used partic. for the treatment of neoplastic disease, eg. melanoma, and provides enhanced gene delivery and expression to the vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Location/Qualifiers

TO GENETIC GOTE ENCORING ONE OF MORE CISTON(S) Which express mention material encoding one or more ciston(s) which express properties of timmunogenic or therapeutic peptide(s)

Claim B; Page 41-42; 50pp; English.

CT the PHLA-BY/Deta-2 microglobulin plasmid expression vector, in addition of the Annamycian resistance gene, contrains the plasmid DNA encoding the class I major hisotocompatibility complex (MHC) antigen. The plasmid is class I major hisotocompatibility complex (MHC) antigen. The plasmid is designed to express these two proteins via a bicistronic mRNA in class I major hisotocompatibility complex (MHC) antigen. The plasmid is celling a protein of transcription of the mRNA is dependent on a Rous Sarcoma Virus (RSV) promoter sequence deriv. from the 3' long terminal respect. Termination of transcription is dependent upon the polyadenylation signal sequence deriv. from the bovine growth hormone comprolled by the CTER. Finally the replication of the plasmid in controlled by the CTER. Finally the presence of a bacterial origin of replication. The vector is used partic. for the treatment of neoplastic controlled by the presence of a characterial origin of in vivo.

CT in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HIA-C gene, DNA probe and transformant cells - for immunisation of animals and monoclonal antibody development.

Claim 1; Page 1; 13pp; Japanese.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-C antigen. See also Q12117 (same patent) and J03112486 and J03112487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      012116;

Claim 2: Page 1: 13pp: Japanese.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-C antimals and prodn. of sequence and 103112486 and J03112487.

The actoxification of metabolites, particularly aflatoxins

Claim 2; Fig 8; 31pp; German.

This sequence encodes a novel protein designated CPRM2 (chemoprotector regulated modifier) that inhibits the effects of genotoxic and/or regulated modifier) that inhibits the effects of genotoxic and/or cytotoxic substances. The invention describes the isolation of CPRM1, CPRM3, mcPRM1, allele s, and mcPRM1, allele r. Transformants containing such proteins are used to produce recombinant proteins and nucleic acids for use in gene therapy and to raise antibodies which are used to (i) detoxify geno- and/or cyto-toxic metabolites and (ii) detect or seed to (i) detoxify geno- and/or cyto-toxic metabolites and (ii) detect or containing containing indicative of increased risk of cancer, e.g. prenatally). The proteins can be used to eliminate carcinogenic allatoxins and to treat neurodegeneration, e.g. Alzhehmer's disease, associated with production of malondialdehyde, a toxic product or the cyclo-oxygenase reaction and prostaglandin metabolism.

Claim 2; Page 6; 7pp; Japanese.

This sequence represents the coding sequence for the Cuphea leptopoda acyl-ACP-thiosesterase (AAT). This sequence was isolated by synthesising a AAT cDNA, and using that sequence to probe for a fragment of the AAT gene, which was then amplified. AAT is a key enzyme in the synthesis of middle chain aliphatic acids, and as such is useful in pharmaceutical preparations, and foods.

Sequence 1490 BP; 351 A; 332 C; 402 G; 405 T;
chemoprotector regulated modifier that inhibits the effects of genotoxic and/or cytotoxic substances. The invention describes the isolation of CPRMI, CPRMI, allele s, and mCPRMI, allele r. Transformants containing such proteins are used to produce recombinant proteins and nucleic acids for use in gene therapy and to raise antibodies which are used to (1) detoxify geno- and/or cyto-toxic metabolites and (11) detect presence of CPRM proteins (or nucleic acid encoding them, including detection of mutations indicative of increased risk of cancer, e.g. prenatally). The proteins can be used to eliminate acrinopenic aflatoxins and to treat neurodegeneration, e.g. Alzheimer's disease, associated with production of malondialdehyde, a toxic product or the cyclo-oxygenase reaction and prostaglandin metabolism. DNA encoding calcium-activated potassium channel - useful in assays

T to identify compounds which increase or decrease potassium ion flux

Claim 3: Page 112: 151pp; English.

This sequence encodes the human small conductance calcium-activated

C potassium channel protein 3 (InSX3) of the invention. The proteins of the

invention are monomers of a calcium-activated potassium channel, where

C humaning in a calculated molecular weight of between 40 and

CC shows and (il) has a unit conductance of between 2 and 60 ps when the

CC monomer is in the functional polymeric form of a potassium chain and is

CC expressed in a Xenopus cocyte. Antibodies specific for the protein, and

CC probes specific for the DNA can be used to detect the presence of the

CC protein or DNA sequences in a sample. Host cells expression of the

CC protein can be used in assays to identify compounds which increase or

CC ell can also be used for the recombinant production of the protein. The

CC ell can also be used for the recombinant production of the protein. The

CC ell can also be used for determine mutations in the SK and IK

CC genes in a computer system. The proteins encoded by the SK and IK

CC an be used in a computer system for determining their three dimensional

Structure, which is useful for determining that bind to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA encoding calcium-activated potassium channel - useful in assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-OCT-1998 (first entry)
Rat rSK3 coding sequence.
Small conductance calcium-activated potassium channel protein 3;

To identify compounds which increase or decrease potassium ion flux

Claim 3: Page 105; 151pp; English.

This sequence encodes the rat small conductance calcium-activated

Claim 3: Page 105; 151pp; English.

This sequence encodes the rat small conductance calcium-activated

Contains the potassium channel, where can monomers of a calcium-activated potassium channel, where

Conformation are monomers of a calcium-activated potassium channel, where

Conformation are monomers of a calcium-activated potassium channel, where

Conformation are monomers of a calcium-activated of Detween 2 and 60 ps when the

Monomer is in the functional polymeric form of a potassium chain and is

conformation and sequences in a sample. Host cells expression of the

protein can be used in a sample. Host cells expression of the

Content or DNA sequences in a sample. Host cells expression of the

Content or DNA sequences in a sample. Host cells expression of the

Content or DNA sequences in a sample. Host cells expression of the

Content or DNA sequences in a sample. Host cells expression of the

Content or DNA sequences of deterting the protein. The transfected host

Coll can also be used for the recombinant production of the protein. The

Coll can also be used for determine mutations in the SK and IK

Genes in a computer system. The proteins encoded by the SK and IK

Contents of the computer system for determining their three dimensional

Contents of the contents of the contents of the protein of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-0CT-1998 (first entry)
Truncated human hSK3 coding sequence.
Small conductance calcium-activated potassium channel protein 3;
hSK3; human; potassium ion flux; ss.
                                                                                                                                                                                                                                                                                                                                                01-OCT-1998 (first entry)
Rat trundated rSK3 coding sequence.
Small conductance calcium-activated potassium channel protein 1;
rSK3: rat; potassium ion flux; ss.

to identify compounds which increase or decrease potassium ion flux claim 3; Page 123-124; 151pp; English.

This sequence encodes the rat small conductance calcium-activated potassium channel protein 3 (rsk3) of the invention. The proteins of the invention are monomers of a calcium-activated potassium channel, where the monomer; (i) has a calculated molecular weight of between 40 and 80 kDa; and (ii) has a unit conductance of between 2 and 60 pS when the monomer is in the functional polymeric form of a potassium chain and is captessed in a Kenopus occyte. Antibodies specific for the protein, and probes specific for the DNA can be used to detect the presence of the protein or DNA sequences in a sample. Host cells expression of the protein or DNA sequences in a sample. Host cells expression of the protein can be used in assays to identify compounds which increase or decrease the potassium ion flux through the protein. The transfected host cell can also be used for the recombinant production of the protein. The SK and IK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding calcium-activated potassium channel - useful in assays to identify compounds which increase or decrease potassium ion flux claim 3; page 128-129; 151pp; English.

This sequence encodes the human small conductance calcium-activated potassium channel protein 3 (hSK3) of the invention. The proteins of the invention are monomers of a calcium-activated potassium channel, where the monomer: (i) has a calcium-activated potassium channel, where the monomer is in the functional polymeric form of a potassium chain and is expressed in a Xenopus cocyte. Antibodies specific for the protein, and probes specific for the DNA can be used to detect the presence of the protein or DNA sequences in a sample. Host cells expression of the protein can be used in assays to identify compounds which increase or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genes in a computer system. The proteins encoded by the SK and IK genes can be used in a computer system for determining their three dimensional structure, which is useful for determining ligands that bind to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human hSK3 coding sequence.
Small conductance calcium-activated potassium channel protein 3;
hSK3; human; potassium ion flux; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     to: 2224

decrease the potassium ion flux through the protein. The transfected host cell can also be used for the recombinant production of the protein. The DNA sequences can also be used for determine mutations in the SK and IK genes in a computer system. The proteins encoded by the SK and IK genes can be used in a computer system for determining their three dimensional structure, which is useful for determining ligands that bind to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human small conductance calcium activated potassium channel gene. Human small conductance calcium activated potassium channel; hKCa3/KCNN3, bipolar disease; schizophrenia; treatment; diagnosis; netcion; transgenic animal; gene therapy; neuropsychiatric disorder; neurological disorder; neuromuscular disorder; immunological disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  such disorders. Use of the wild type gene in gene therapy to treat these disorders is also contemplated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human small conductance calcium activated potassium channel-3 useful for diagnosis, treatment and prevention of particularly schizophrenia and bipolar disorders claim 3; Figure 5; 95pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disorders associated with a dysfunctional or altered small conductance calcium-activated potassium channel-3 (hKCa3/KCNN3) comprise neuropsychiatric, neurological, neuromuscular and immunological disorders, specifically bipolar disease and schizophrenia. Transgenic animals comprising the hKCa3/KCNN3 gene as a transgene in their somatic and germ cell lines can be used as models for studying these conditions and their treatments. Antibodies (Ab) directed against the hKCa3/KCNN3 polypeptide or conservative variants of the polypeptide can be used to conservative variants of the polypeptide can be used to detect those at risk from these disorders and also in therapy against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Location/Qualifiers

                                                                                                                                                                    Pression into acids encoding human secreted proteins - obtained from the nucleic acids encoding human secreted proteins - obtained from umbilical cord, lymph ganglia, I ymphocytes and placental itssue

lymphocytes and placental itssue

Claim 1; Page 268-269; 411pp; English.

X41379 to X41526 represent 5' expressed sequence tags (ESTS) for human secreted proteins, and encode the proteins given in Y12521 to Y12668, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differantiation activity, hemmatopoiesis regulating activity, chemotactic/
chemokinetic activity, haemostatic and thrombolytic activity, receptor/
ligand activity, antiinflammatory activity, tumour inhibition activity and chromosome mapping products can be used in forensic, gene therapy and chromosome mapping products. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide or the insertion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human: secreted protein, EST: expressed sequence teg; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopolesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; antiinflammatory; tumour inhibition; antitumour; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               22-JUN-1999 (first entry)
